
**THE ISSUES OF INCREASING THE EFFICIENCY OF SPIRITUAL AND
EDUCATIONAL WORKS IN OUR REPUBLIC**

Abstract

Another important vital factor that directly affects the formation of spirituality is closely related to the education system. It is known that our fathers and grandfathers considered knowledge, education and upbringing to be the most important condition and guarantees of human maturity and development of the nation [1-7].

Of course, education is a product of consciousness, but at the same time it is the most important factor that determines the level of consciousness and its development, that is, it forms and enriches people's spirituality. Therefore, it is impossible to develop spirituality without changing the education system and, on this basis, consciousness [8-11].

Therefore, superficial, formal approaches and ill-thought-out work are absolutely unacceptable in this area. Our basic law stipulates that the issue of school and education should be under the control of the state and society. At the same time, this is a nationwide issue that requires the participation and support of the general public, and the entire nation.

We should not forget that the foundation of our future is created in the fields of knowledge, in other words, the future of our nation depends on the education and upbringing of the youth [12-17].

For this, every parent, teacher, and coach should, first of all, see a person in the person of each child. Based on this simple requirement, we should accept that the main goal and task of education should be to raise our children to be perfect people who can think independently and broadly. This requires that education and training work be carried out in harmony [18-20].

Education cannot be separated from education, and education cannot be separated from education - this is an oriental view, an oriental philosophy of life.

When I think about it, I remember the deeply meaningful words of Abdulla Awlani: "Education is a matter of life - or death, or salvation - or destruction, or happiness - or disaster for us." These words of our great enlightened grandfather are of great importance for our nation at the beginning of the last century.

That is why, from the first years of independence, there was a great need to fundamentally reform the education and training, science, and vocational training systems throughout the country. The process related to the development of the national personnel training program has shown that many problems have accumulated in this field over the years. That's why we decided to do a difficult, responsible, but impossible task step by step.

In fact, there are thousands and thousands of students who are studying in academic lyceums and vocational colleges with all conditions, family educational institutions, have acquired modern professions, trades and sciences, and can speak three languages easily. , we are witnessing that our dreams and aspirations are bearing fruit today in the example of our young personnel who are entering the big life and are clearly showing their talent and potential.

In the course of the implementation of the national program for the training of teachers, strengthening the attention to the strengthening of the material and technical base of school education, especially comprehensive schools, has become the most important and serious issue on our agenda. For this purpose, the national state program for the development of school education, which is an organic and logical continuation of the national program, was adopted in our country.

In accordance with this program, great work is being done to strengthen the material and technical base of about ten thousand general education schools in our country, to fundamentally improve the content of the educational process, and encourage the work of teachers materially and morally.

In short, if we say that the great work we have done in the field of education in recent years, in terms of its scope and essence, has created a solid foundation for the achievement of our noble intentions, the spiritual growth of our youth and the whole nation, no mistake.
