This article provides information on methods of teaching elementary students to creative thinking, on the development and development of the educational program, on the development of the educational program.

**Keywords:** education, educational institutions, educational program, programs, enterprise events, provision.

### **INTRODUCTION**

In the educational system of our large educational institution, the necessary problems and tasks for the future national camaraderie are being developed. In this regard, the provision and development of the basics of education in essence in all higher educational institutions in Uzbekistan is the first, important and goal-appropriate factor.

From this hundred, students entering the school and young people leaving the school, it is necessary that the school organizer does not find readiness or opportunity for the emergence of programs of educational institutions and their development even without participating in direct work processes.

In order to solve this issue, it is not necessary to process additional or technical poison on the topic of comprehension and development of the educational program, but to carry out systematic work on the basis of a number of Light past comparisons and strategies.

For example, for the development of an educational program, it is necessary to develop such subjects as mathematics, physics, chemistry, and to develop theoretical foundations into practice. It is necessary to establish development in sira, technology as well. Mastering processes that systematize students in an adult educational institution and personal support for each student are necessary.

In addition, another view of the development of educational programs is to increase their use. They assist in the profession of legal and personal capital to enhance the entire education in Orta Asia and other regions. In this view, it is necessary to organize large-scale trainings in higher education institutions, offer and provide programs of basic education to the requirements, increase the opportunities for university assistance to women and kambaba-based schools or higher education institutions. As published, another important issue opens up new territories for the education of students. It is necessary to provide it to reduce undergraduates and graduate students, to ensure new strategies to add or assimilate teacher

projects from a classroom related to enterprise events through the future, and Personal Assistance League creation Awards.

As a result, you can participate in universities and educational institutions for the genius and development of the educational program, and at the end of them, Uzbekistan will prepare for the genius of a large educational program and the provision of national development and inclusion in the future.

The main tasks of education are to arm the individual with scientific knowledge, skills and qualifications. Education means several things as a kind of human activity. That is, the formation of knowledge, skills and competencies in educators is the formation of worldview, thoughts and beliefs in them, as well as the cultivation of their abilities. Through education, the younger generation is given the knowledge accumulated through human experience, the necessary skills and qualifications and beliefs are formed. Education is a joint activity of teachers and students, which has a dual nature, that is, two sides of the teacher and the student are actively involved in it. The teacher instills knowledge, skills and skills on the basis of a plan and program with a clear goal, while the student actively assimilates it. Notification, knowing is a complex, difficult, contradictory process. In this process, processes related to the human psyche, such as intuition, perception imagination and thinking, are actively involved and play an important role. Teaching to give knowledge to young people. It is in them to form skills and competencies, that is, to educate a serious logical thinking capable of learning reality. In today's rapidly developing modern era of globalization and information, further development and improvement of education cannot be increased to Amai without applying various forms of innovation in the course of the lesson. Innovative education in education, first of all, creative abilities, self-development and creative thinking ehg are considered from important motivations. In determining the creative potential of Primary School students, the correct and appropriate use of innovative technologies in the educational process is important in the development of their creative thinking motivations. Creativity is a Latin word meaning something like —creation or —creation from what is not. Creativity is a practical action carried out by an individual, which must reflect a certain novelty in itself, new ideas. The concept of creativity in itself reflects diversity, curiosity, contemplation and nonconformity. Today, it is important for a primary school teacher to have creativity and creativeness, which is an important factor in the formation and development of these qualities even in students in his educational process.
