

## **MONITORING THE SAFETY OF THE INVESTIVE ENVIRONMENT IN THE REGIONS**

Olimbekov Odilbek Saidmurodovich

Tashkent State University of Economics Independent Researcher of  
the Department of “Valuation and Investments”

As a result of the increasing competition for attracting financial institutions in the world, serious attention is paid to improving the investive environment in countries, their regions, relevant sectors of the economy and regions. Today, the "Foreign Direct Investment Flow" returned to pre-pandemic levels in 2022 and amounted to USD 1.6 trillion. At the same time, the scale of financing of cross-border transactions and international projects has been dramatically expanded. However, the recovery of the investive environment in developing countries remains fragile. The fragile socio-political situation that the world is currently facing is exacerbated by the COVID-19 pandemic, which is still ongoing, as well as climate change, which exacerbates the vulnerability in the investive environment." It will ensure the active attraction of investments to the regions, the improvement of financial mechanisms, the increase and improvement of the attractiveness of the investive environment, and the effective use of tax incentives.

As it is known from the experience of developed and developing countries in the world, one of the most important criteria for attracting investments to the regions is the improvement of the investive environment, ensuring its attractiveness, the development of the business climate through the convenient deployment of production infrastructure networks and production forces in the regions.

Further improving the investive environment in Uzbekistan, stimulating the attraction of foreign direct investment, strengthening the confidence of investors in the consistency of investive policy and increasing the competence of government agencies in working with investors, managing the implementation of investive projects, forming a balanced investive policy, ensuring investive activity Systematic work is being carried out to improve the competitiveness of the Tashkent region. The importance of the development of an organizational and economic mechanism for ensuring the effective operation of potential and social vectors is of high risk in the country, the application of models for the formation of the investive environment for regions, the finality of projects implemented in special economic zones, the development of an organizational and economic mechanism to ensure the effective operation of potential and entrepreneurial vectors.

In recent years, the process of structural changes and modernization that have been actively implemented in the economy has further increased investment activity. The significant growth of investments in the economy from year to year allows it to show its positive results through

the growth of national production. As a result of government attention and support for investment activities, GDP and investments gained growth rates.

In our opinion, taking into account the all-round positive impact of foreign investment on the development of the region's economy, it is expedient to establish the following objectives:

- providing opportunities for the formation of a wide network of market infrastructures with the optimal distribution of production forces and means of production in the economy of the region;
- to introduce into practice all directions and opportunities that have a positive impact on the process of repeated production in the economy of the region;
- activation of infrastructures that create a share of legally guaranteed investors satisfying and ensure financial growth, taking into account the characteristics of the region;
- accelerating sustainable growth and integration of the country into the world economic system by activating all sectors of the region's economy.

Thanks to the penetration of foreign capital into the economy of the region, new jobs will be created in this region, which will allow positive solutions to one of the most pressing issues of the economy. One of the main factors contributing to the development of the region's economy is the issue of infrastructure, as we know, one of the main issues that hinder the entry of foreign investment into our country today is infrastructure, since each foreign investor pays special attention to the level of infrastructure in the region in which he wants to invest his capital and contributes to the development of the infrastructure of the region by building factories or factories, which is the region It is also good for the economy.
