**Abstract**

Education of a healthy generation of children of preschool age in this article, values, system of preschool education.

**Key words:** education, children, Pre-school, new technology.

The agreement of independence of our state and national interest in education and preschool education of young children opened wide opportunities to the development of forms. Pre-school education of children, age, interest and skills - refers to the spiritual sources and modern requirements and needs in the case that nurturing caregivers with managing with a clear focus on practical and theoretical dialogue. Pre-school age children on the basis of universal values of education to realize its essence nurturing need to. Values are divided into several types according to their significance. In particular, ins, and is the highest value for most of his life. The place of man in any thing it is nonsense to talk about the value of not expensive. So also the value of expensive generation of man, his marriage to improve levels of knowledge and cultural development, health, the protection of life is the main direction of our state policy. Radical transformations underway in our society, the reform of life all people of the dark, rich, beautiful, a genuine man himself to feel free, the results of their labor, for their own fate, his country would be to ensure that the owner is paid.

The natural values plays a large role in order to meet human needs. Natural values the earth and its resources under the earth, water, air, forests, plants, and others enter the world of xayvonot. Central asia, in particular, the variety of different of uzbekistan the ground is rich in minerals. The majority of the minerals that lay close to the surface of the earth opened and their nation's economic, scientific and technical tarakqiyoti served. Xali the same time opened ruyobga of mine out too much. A very small portion of this mine directly out of the earth, inside the earth that the majority lay hiding. The economic importance of natural raw materials of the pile of "mineral" the national wealth of the republic of uzbekistan, is one of its main values. The overwhelming natural resources of uzbekistan, has shaped jug'rofiy comfortable. It is a source of nature and natural resources. Natural resources, namely fuel, different metals, ore, and air, water, plants, mankind can live xayvonot if not the world. At the chief of blessings for us as the source material nature, health, joy, mercy married and brought everyone in the institute of azerbaijanis as too perfect to ruin his rich spiritual importance of these factors awfully never yuqotmaydi.

To those material blessings of mother earth, the source of the tools is the treasure of the initial work, the intention of the cradle of human development. Things necessary for himself, the man from earth in charge. The earth of man is the look. Well-known English scientist vilzmpetti aytganideq the economist, labor is the father of wealth, Earth his mather. Pre-school education to children of age on the basis of universal values of human labor, nurturing them in the first place, actions, insight of mind created with "second nature", that is, a wealth of diverse, plant and abrikalar, power production, vehicles, equipment, accommodation, property, dating from the same material that the values qabi blessing and should explain. As it is known, the basis of the values of the society material and technical material make up. Has any one specific material base of human society tehn ca. They jihatidangina respects from each other, not the amount in quality also makes a difference. Use stone and wooden weapons soda arc of the invention, and to hunt, to be discovered the use of fire, metal, and other weapons made from the material of all of the primitive society to the work of the technical base for karakterlidir qabi. The employment of weapons slightly improved agriculture, and crafts use in construction work, heavy physical labor, the labor of slaves in all areas of society that require use of the technical base for mod quldorlik violently from a typical sign. The use of wind and water mills, metals to dissolve and re-feodal bazadir technical material that relate to the society axshilash ways to use them. The large and strong to the implementation of the invention, the technical achievements in the production of wide range of social science of the production process, automation and new technology the introduction of natural, material and labor resources of the society material and technical indo'strial extensive use constitute the base.

The republic, which is developed in mechanical engineering, metallurgy, chemistry, [heat energy](#) transport and communication, capital construction, light, food, agricultural industry and other complex national independent values will tash cellar riches of the people of Uzbekistan. Property values will the basis of the ash of di. The state column hyquqi consumers taking into account that economic activity, business and labor freedom, with due regard for the equality of all forms of property and legal aspects-that would be protected in times guarantees. As noted in the matter of ownership changes over time in the near relations, the president must be carried out strictly. The property owner is required to achieve his true quliga pass. The fight for the preservation and enhancement of this property so only those is its only owner. "Property," says I. Karimov, — literally ulkdorga will serve the owner of his estate to the whole country by the month, the prosperity of every citizen service is necessary to achieve. Strengthening the economy of their country from those who appear only then a group of home owners if you are interested in a genuine, and the strengthening of the social protection system, creates opportunities to ensure social and political stability".
